Forecast for Sunday 27 Sep 2020

Weather: Dry through the overnight period with lengthy clear periods allowing it to become cold with a touch of frost in the valleys. Sunday will be another fine day with blue skies and sunshine for most of the national park. Some thin high cloud may arrive during the afternoon, however skies will remain mostly sunny. Winds will be lighter than over the last couple of days and therefore it will feel less chilly, although there will still be a noticeable wind chill on some of the highest ridges and summits. Staying dry and mostly clear well into the evening.

Chance of cloud free mountain/hill tops above 600m: 90% to almost certain. A few ribbons of cloud may develop in some valleys just after dawn and the odd patch of fair weather cloud will develop above 950m, but otherwise little if any cloud is expected.

Visibility: Superb visibility with excellent air clarity allowing distant hills and landmarks to be clearly visible.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Not as chilly as on Saturday, but still feeling on the cold side for the time of year. Despite the sunshine and winds easing through the day, it will feel around or below freezing over the highest summits for much of the day.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Sat 26 Sep 2020	0.2mm	0.6mm	21.6mm

Forecast for Monday 28 Sep 2020

Weather: Dry and cold with clear periods during the overnight hours and a patchy frost developing. Starting dry on Monday morning with some early brightness, but clouding over through the morning with outbreaks of showery rain arriving from the west during the afternoon. Possibly clearing later in the day with some late brightness in the west.

Maximum wind: Southwest becoming Northwest 15-20mph gusting 25-30mph.

Chance of cloud free mountain/hill tops above 600m: 70% first thing, soon lowering to 40%, but increasing to 60% at the end of the day. Periods of cloud soon becoming widespread and persistent above 700m, especially in the west, though more broken in the east until mid afternoon. Cloud lowering to 400-500m at times in association with any rain before possibly rising after dark with just patches above 800m likely by midnight.

Visibility: Generally good but nearby hills disappearing during periods of rain through the afternoon. Poor or very poor in hill cloud.

Temperature: **Valleys:** Minus 1 Celsius, rising to plus 17 Celsius.
At 600m: Plus 6 Celsius, rising to plus 11 Celsius.
Freezing level: Above the summits.
